148304 - SUSE SLED15 / SLES15 Security Update : MozillaFirefox (SUSE-SU-2021:1007-1)

Synopsis

The remote SUSE host is missing one or more security updates.

Description

This update for MozillaFirefox fixes the following issues :
Firefox was updated to 78.9.0 ESR (MFSA 2021-11, bsc#1183942)
- CVE-2021-23981: Texture upload into an unbound backing buffer resulted in an out-of-bound read
- CVE-2021-23982: Internal network hosts could have been probed by a malicious webpage
- CVE-2021-23984: Malicious extensions could have spoofed popup information
- CVE-2021-23987: Memory safety bugs
Note that Tenable Network Security has extracted the preceding description block directly from the SUSE security advisory. Tenable has attempted to automatically clean and format it as much as possible without introducing additional issues.

147938 - SUSE SLES15 Security Update : glib2 (SUSE-SU-2021:0890-1)

Synopsis

The remote SUSE host is missing one or more security updates.

Description

This update for glib2 fixes the following issues :
CVE-2021-27218: g_byte_array_new_take takes a gsize as length but stores in a guint, this patch will refuse if the length is larger than guint. (bsc#1182328)
CVE-2021-27219: g_memdup takes a guint as parameter and sometimes leads into an integer overflow, so add a g_memdup2 function which uses gsize to replace it. (bsc#1182362)
Note that Tenable Network Security has extracted the preceding description block directly from the SUSE security advisory. Tenable has attempted to automatically clean and format it as much as possible without introducing additional issues.

11219 - Nessus SYN scanner

Synopsis

It is possible to determine which TCP ports are open.

Description

This plugin is a SYN 'half-open' port scanner. It shall be reasonably quick even against a firewalled target.
Note that SYN scans are less intrusive than TCP (full connect) scans against broken services, but they might cause problems for less robust firewalls and also leave unclosed connections on the remote target, if the network is loaded.

147570 - SUSE SLED15 / SLES15 Security Update : openldap2 (SUSE-SU-2021:0723-1)

Synopsis

The remote SUSE host is missing one or more security updates.

Description

This update for openldap2 fixes the following issues :
bsc#1182408 CVE-2020-36230 - an assertion failure in slapd in the X.509 DN parsing in decode.c ber_next_element, resulting in denial of service.
bsc#1182411 CVE-2020-36229 - ldap_X509dn2bv crash in the X.509 DN parsing in ad_keystring, resulting in denial of service.
bsc#1182412 CVE-2020-36228 - integer underflow leading to crash in the Certificate List Exact Assertion processing, resulting in denial of service.
bsc#1182413 CVE-2020-36227 - infinite loop in slapd with the cancel_extop Cancel operation, resulting in denial of service.
bsc#1182416 CVE-2020-36225 - double free and slapd crash in the saslAuthzTo processing, resulting in denial of service.
bsc#1182417 CVE-2020-36224 - invalid pointer free and slapd crash in the saslAuthzTo processing, resulting in denial of service.
bsc#1182415 CVE-2020-36226 - memch->bv_len miscalculation and slapd crash in the saslAuthzTo processing, resulting in denial of service.
bsc#1182419 CVE-2020-36222 - assertion failure in slapd in the saslAuthzTo validation, resulting in denial of service.

bsc#1182420 CVE-2020-36221 - slapd crashes in the Certificate Exact Assertion processing, resulting in denial of service (schema_init.c serialNumberAndIssuerCheck).
bsc#1182418 CVE-2020-36223 - slapd crash in the Values Return Filter control handling, resulting in denial of service (double free and out-of-bounds read).
bsc#1182279 CVE-2021-27212 - an assertion failure in slapd can occur in the issuerAndThisUpdateCheck function via a crafted packet, resulting in a denial of service (daemon exit) via a short timestamp.
This is related to schema_init.c and checkTime.
Note that Tenable Network Security has extracted the preceding description block directly from the SUSE security advisory. Tenable has attempted to automatically clean and format it as much as possible without introducing additional issues.

46180 - Additional DNS Hostnames

Synopsis

Nessus has detected potential virtual hosts.

Description

Hostnames different from the current hostname have been collected by miscellaneous plugins. Nessus has generated a list of hostnames that point to the remote host. Note that these are only the alternate hostnames for vhosts discovered on a web server.
Different web servers may be hosted on name-based virtual hosts.

148151 - SUSE SLES15 Security Update : libzypp, zypper (SUSE-SU-2021:0956-1)

Synopsis

The remote SUSE host is missing one or more security updates.

Description

This update for libzypp, zypper fixes the following issues :
Update zypper to version 1.14.43 :
doc: give more details about creating versioned package locks (bsc#1181622)
man: Document synonymously used patch categories (bsc#1179847)
Fix source-download commands help (bsc#1180663)
man: Recommend to use the --non-interactive global option rather than the command option -y (bsc#1179816)
Extend apt packagemap (fixes #366)
--quiet: Fix install summary to write nothing if there's nothing todo (bsc#1180077)
Prefer /run over /var/run.
Update libzypp to 17.25.8 :
Try to provide a mounted /proc in --root installs (bsc#1181328) Some systemd tools require /proc to be mounted and fail if it's not there.
Enable release packages to request a releaxed suse/opensuse vendorcheck in dup when migrating. (bsc#1182629)
Patch: Identify well-known category names (bsc#1179847) This allows to use the RH and SUSE patch categrory names synonymously: (recommended = bugfix) and (optional = feature = enhancement).
Add missing includes for GCC 11 compatibility.
Fix %posttrans script execution (fixes #265) The scripts are execuable. No need to call them through 'sh -c'.
Commit: Fix rpmdb compat symlink in case rpm got removed.
Repo: Allow multiple baseurls specified on one line (fixes #285)
Regex: Fix memory leak and undefined behavior.
Add rpm buildrequires for test suite (fixes #279)
Use rpmdb2solv new -D switch to tell the location ob the rpmdatabase to use.
CVE-2017-9271: Fixed information leak in the log file (bsc#1050625 bsc#1177583)
RepoManager: Force refresh if repo url has changed (bsc#1174016)
RepoManager: Carefully tidy up the caches. Remove non-directory entries. (bsc#1178966)
RepoInfo: ignore legacy type= in a .repo file and let RepoManager probe (bsc#1177427).
RpmDb: If no database exists use the _dbpath configured in rpm. Still makes sure a compat symlink at /var/lib/rpm exists in case the configures _dbpath is elsewhere. (bsc#1178910)
Fixed update of gpg keys with elongated expire date (bsc#1179222)
needreboot: remove udev from the list (bsc#1179083)
Fix lsof monitoring (bsc#1179909)
Rephrase solver problem descriptions (jsc#SLE-8482)
Adapt to changed gpg2/libgpgme behavior (bsc#1180721)
Multicurl backend breaks with with unknown filesize (fixes #277)
Note that Tenable Network Security has extracted the preceding description block directly from the SUSE security advisory. Tenable has attempted to automatically clean and format it as much as possible without introducing additional issues.

86420 - Ethernet MAC Addresses

Synopsis

This plugin gathers MAC addresses from various sources and consolidates them into a list.

Description

This plugin gathers MAC addresses discovered from both remote probing of the host (e.g. SNMP and Netbios) and from running local checks (e.g. ifconfig). It then consolidates the MAC addresses into a single, unique, and uniform list.

10114 - ICMP Timestamp Request Remote Date Disclosure

Synopsis

It is possible to determine the exact time set on the remote host.

Description

The remote host answers to an ICMP timestamp request. This allows an attacker to know the date that is set on the targeted machine, which may assist an unauthenticated, remote attacker in defeating time-based authentication protocols.
Timestamps returned from machines running Windows Vista / 7 / 2008 / 2008 R2 are deliberately incorrect, but usually within 1000 seconds of the actual system time.

Solution

Filter out the ICMP timestamp requests (13), and the outgoing ICMP timestamp replies (14).

148162 - SUSE SLED15 / SLES15 Security Update : ruby2.5 (SUSE-SU-2021:0933-1)

Synopsis

The remote SUSE host is missing one or more security updates.

Description

This update for ruby2.5 fixes the following issues :
CVE-2020-25613: Fixed a potential HTTP Request Smuggling in WEBrick (bsc#1177125).
Enable optimizations also on ARM64 (bsc#1177222)
Note that Tenable Network Security has extracted the preceding description block directly from the SUSE security advisory. Tenable has attempted to automatically clean and format it as much as possible without introducing additional issues.

147564 - SUSE SLED15 / SLES15 Security Update : git (SUSE-SU-2021:0757-1)

Synopsis

The remote SUSE host is missing one or more security updates.

Description

This update for git fixes the following issues :
On case-insensitive filesystems, with support for symbolic links, if Git is configured globally to apply delay-capable clean/smudge filters (such as Git LFS), Git could be fooled into running remote code during a clone. (bsc#1183026, CVE-2021-21300)
Note that Tenable Network Security has extracted the preceding description block directly from the SUSE security advisory. Tenable has attempted to automatically clean and format it as much as possible without introducing additional issues.

19506 - Nessus Scan Information

Synopsis

This plugin displays information about the Nessus scan.

Description

This plugin displays, for each tested host, information about the scan itself :
- The version of the plugin set.
- The type of scanner (Nessus or Nessus Home).
- The version of the Nessus Engine.
- The port scanner(s) used.
- The port range scanned.
- The ping round trip time
- Whether credentialed or third-party patch management checks are possible.
- Whether the display of superseded patches is enabled
- The date of the scan.
- The duration of the scan.
- The number of hosts scanned in parallel.
- The number of checks done in parallel.

146367 - SUSE SLED15 / SLES15 Security Update : python (SUSE-SU-2021:0355-1)

Synopsis

The remote SUSE host is missing one or more security updates.

Description

This update for python fixes the following issues :
buffer overflow in PyCArg_repr in _ctypes/callproc.c, which may lead to remote code execution (bsc#1181126, CVE-2021-3177).
Provide the newest setuptools wheel (bsc#1176262, CVE-2019-20916) in their correct form (bsc#1180686).
Note that Tenable Network Security has extracted the preceding description block directly from the SUSE security advisory. Tenable has attempted to automatically clean and format it as much as possible without introducing additional issues.

22869 - Software Enumeration (SSH)

Synopsis

It was possible to enumerate installed software on the remote host via SSH.

Description

Nessus was able to list the software installed on the remote host by calling the appropriate command (e.g., 'rpm -qa' on RPM-based Linux distributions, qpkg, dpkg, etc.).

102094 - SSH Commands Require Privilege Escalation

Synopsis

This plugin reports the SSH commands that failed with a response indicating that privilege escalation is required to run them.

Description

This plugin reports the SSH commands that failed with a response indicating that privilege escalation is required to run them. Either privilege escalation credentials were not provided, or the command failed to run with the provided privilege escalation credentials.
NOTE: Due to limitations inherent to the majority of SSH servers, this plugin may falsely report failures for commands containing error output expected by sudo, such as 'incorrect password', 'not in the sudoers file', or 'not allowed to execute'.

146460 - SUSE SLES15 Security Update : containerd, docker, docker-runc, golang-github-docker-libnetwork (SUSE-SU-2021:0435-1)

Synopsis

The remote SUSE host is missing one or more security updates.

Description

This update for containerd, docker, docker-runc, golang-github-docker-libnetwork fixes the following issues :
Security issues fixed :
CVE-2020-15257: Fixed a privilege escalation in containerd (bsc#1178969).
CVE-2021-21284: potential privilege escalation when the root user in the remapped namespace has access to the host filesystem (bsc#1181732)
CVE-2021-21285: pulling a malformed Docker image manifest crashes the dockerd daemon (bsc#1181730)
Non-security issues fixed :
Update Docker to 19.03.15-ce. See upstream changelog in the packaged /usr/share/doc/packages/docker/CHANGELOG.md. This update includes fixes for bsc#1181732 (CVE-2021-21284) and bsc#1181730 (CVE-2021-21285).
Only apply the boo#1178801 libnetwork patch to handle firewalld on openSUSE. It appears that SLES doesn't like the patch. (bsc#1180401)
Update to containerd v1.3.9, which is needed for Docker v19.03.14-ce and fixes CVE-2020-15257. bsc#1180243
Update to containerd v1.3.7, which is required for Docker 19.03.13-ce.
bsc#1176708
Update to Docker 19.03.14-ce. See upstream changelog in the packaged /usr/share/doc/packages/docker/CHANGELOG.md. CVE-2020-15257 bsc#1180243 https://github.com/docker/docker-ce/releases/tag/v19.03.14
Enable fish-completion
Add a patch which makes Docker compatible with firewalld with nftables backend. Backport of https://github.com/moby/libnetwork/pull/2548 (bsc#1178801, SLE-16460)
Update to Docker 19.03.13-ce. See upstream changelog in the packaged /usr/share/doc/packages/docker/CHANGELOG.md. bsc#1176708
Fixes for %_libexecdir changing to /usr/libexec (bsc#1174075)
Emergency fix: %requires_eq does not work with provide symbols, only effective package names. Convert back to regular Requires.
Update to Docker 19.03.12-ce. See upstream changelog in the packaged /usr/share/doc/packages/docker/CHANGELOG.md.
Use Go 1.13 instead of Go 1.14 because Go 1.14 can cause all sorts of spurrious errors due to Go returning -EINTR from I/O syscalls much more often (due to Go 1.14's pre-emptive goroutine support).
Add BuildRequires for all -git dependencies so that we catch missing dependencies much more quickly.
Update to libnetwork 55e924b8a842, which is required for Docker 19.03.14-ce. bsc#1180243
Add patch which makes libnetwork compatible with firewalld with nftables backend. Backport of https://github.com/moby/libnetwork/pull/2548 (bsc#1178801, SLE-16460)
Note that Tenable Network Security has extracted the preceding description block directly from the SUSE security advisory. Tenable has attempted to automatically clean and format it as much as possible without introducing additional issues.

146978 - SUSE SLES15 Security Update : grub2 (SUSE-SU-2021:0684-1)

Synopsis

The remote SUSE host is missing one or more security updates.

Description

This update for grub2 fixes the following issues :
grub2 now implements the new 'SBAT' method for SHIM based secure boot revocation. (bsc#1182057)
Following security issues are fixed that can violate secure boot constraints :
CVE-2020-25632: Fixed a use-after-free in rmmod command (bsc#1176711)
CVE-2020-25647: Fixed an out-of-bound write in grub_usb_device_initialize() (bsc#1177883)
CVE-2020-27749: Fixed a stack-based buffer overflow in grub_parser_split_cmdline (bsc#1179264)
CVE-2020-27779, CVE-2020-14372: Disallow cutmem and acpi commands in secure boot mode (bsc#1179265 bsc#1175970)
CVE-2021-20225: Fixed a heap out-of-bounds write in short form option parser (bsc#1182262)
CVE-2021-20233: Fixed a heap out-of-bound write due to mis-calculation of space required for quoting (bsc#1182263)
Note that Tenable Network Security has extracted the preceding description block directly from the SUSE security advisory. Tenable has attempted to automatically clean and format it as much as possible without introducing additional issues.

141118 - Target Credential Status by Authentication Protocol - Valid Credentials Provided

Synopsis

Valid credentials were provided for an available authentication protocol.

Description

Nessus was able to determine that valid credentials were provided for an authentication protocol available on the remote target because it was able to successfully authenticate directly to the remote target using that authentication protocol at least once. Authentication was successful because the authentication protocol service was available remotely, the service was able to be identified, the authentication protocol was able to be negotiated successfully, and a set of credentials provided in the scan policy for that authentication protocol was accepted by the remote service. See plugin output for details, including protocol, port, and account.
Please note the following :
- This plugin reports per protocol, so it is possible for valid credentials to be provided for one protocol and not another. For example, authentication may succeed via SSH but fail via SMB, while no credentials were provided for an available SNMP service.
- Providing valid credentials for all available authentication protocols may improve scan coverage, but the value of successful authentication for a given protocol may vary from target to target depending upon what data (if any) is gathered from the target via that protocol. For example, successful authentication via SSH is more valuable for Linux targets than for Windows targets, and likewise successful authentication via SMB is more valuable for Windows targets than for Linux targets.
